

Plan and shop drawing verification: MOCK

Each plan element was matched with its equivalent in the shop drawings and its reinforcement attributes were compared. The final decision remains the engineer's.

	Elements
Compliant	1
Non-compliant	1
Possible non-compliance, to verify (the pairing or the agreeing values are too weak to be sure)	1
of which in systematic differences (the same difference at several places, listed once)	0
Matched, nothing comparable	0
Missing from the shop drawings (on the plan, no equivalent found)	1
Added in the shop drawings (no plan equivalent found)	4

Per plan sheet

Plan sheet	Plan file	Compliant	Non-compliant	To verify	Nothing comparable	Missing from shop drawings
S-201	MOCK_PLAN_STR.pdf	1	1	1	0	1

Sheet S-201: discrepancies

Element	Level	Plan position	Shop drawing position	Discrepancy
column C-3 Non-compliant	N2	MOCK_PLAN_STR.pdf p1 x 1176 y 1102	MOCK_COLONNES NIV 2.pdf p1 x 1210 y 1102	At column at C-3, counted bars count is 6 on the plan and 4 in the shop drawing.
slab B-3 To verify	N2	MOCK_PLAN_STR.pdf p1 x 1164 y 694	MOCK_DALLE NIV 2.pdf p1 x 1155 y 694	At slab at B-3, spaced bars spacing mm is 300 on the plan and 350 in the shop drawing.

Missing from the shop drawings

Shop drawings do not cover every plan element, so an element listed here is not necessarily an error. The note says why no counterpart was paired.

Plan sheet	Element	Level	Plan position	Note
S-201	notes generales D-2	N2	MOCK_PLAN_STR.pdf p1 x 600 y 1595	shop drawings do not cover this element, or no counterpart was found

Added in the shop drawings

Elements found in the shop drawings with no equivalent on the plan.

Shop file	Element	Level	Shop drawing position
MOCK_COLONNES NIV 2.pdf	column D-2	N2	MOCK_COLONNES NIV 2.pdf p1 x 600 y 1595
MOCK_DALLE NIV 2.pdf	slab D-2	N2	MOCK_DALLE NIV 2.pdf p1 x 600 y 1595
MOCK_POUTRES NIV 2.pdf	beam P-1	N2	MOCK_POUTRES NIV 2.pdf p1 x 363 y 1494
MOCK_POUTRES NIV 2.pdf	beam D-2	N2	MOCK_POUTRES NIV 2.pdf p1 x 600 y 1595

Method and limits

- Text and its page position are read from the PDFs; pages without a text layer, or mostly raster, are read with OCR on this machine. Nothing leaves the machine.
- Elements are grouped from nearby text. A note's grid cell comes from the position of its text, which can sit one gridline away from the member it describes, so notes are also tried against neighbouring cells; such pairings are marked 'to verify'.
- Units are converted before comparing: the same value written in inches and in millimetres is compliant.
- A bar group counts as a non-conformity only when the rest of the group agrees; groups that share nothing are treated as different notes.
- The local model answered 0 questions on pairing and comparison and wrote the sentences in this report (0 distinct differences).
